

# Maxava Monitor™

Maxava Monitor Mi8 is an intelligent monitoring solution for your IBM Power Systems, Windows and Linux. It delivers up-to-date system information wherever you are, however you want it and on the device you choose.

## Introducing Maxava Monitor Mi8, your intelligent monitoring solution

*Monitoring is not just a technical exercise – monitoring has bottom line benefits for almost every company.*

- Business continuity that improves revenue and profits
- Better end user satisfaction and experiences which delivers higher employee productivity
- Right-sized support and operational resourcing for the demands on your mission critical systems
- Frees up time and capacity for continuous improvement by your IT specialists
- Improves the information available for operational decisions
- Creates faster responses from your IT specialists during incidents.

Maxava Monitor Mi8 has been designed from the ground up to deliver the very latest monitoring solutions for all key facets of your IBM Power Systems, Windows and Linux. Maxava Mi8's rapid configuration, low cost deployment and monthly payment terms deliver immediate visibility of the performance and availability of your system.

## Maximize Your Systems Availability with Maxava Monitor Mi8

### Total Visibility

See all your critical server, application and availability notifications on a single pane of glass, no matter where those workloads are processed: in the cloud, at a co-location or on-premise.

### Rapid Resolution

Be informed in real-time as issues arise so you can identify the root cause of the problem and rapidly resolve it.

### Intelligent Monitoring

Customizable real-time alerts identify the problems that matter to you so you can resolve issues before they have a major impact on your business.

### Right Information to the Right People

Maxava Monitor Mi8 can enable you or your 3rd party partners to seamlessly manage your application and hardware messages.

### Make Better Decisions

Take advantage of performance and availability data to make informed decisions to right-size the support required for your IT infrastructure.

## Maxava Monitor Mi8 For Your Intelligent Monitoring Experience

- **Available Everywhere** - Mi8 makes it easy to monitor IBM Power Systems, Windows and Linux applications and systems even when on the go. Its web-based interfaces mean access is securely available via a browser – from desktop, tablet or mobile phone. It even has its own specialist App for iPads, iPhones and the Apple Watch.
- **Set and Forget** – Automate your standard monitoring process with out-of-the-box monitoring rules and alerts for common tasks.
- **Control Your User Experience** – Only see those servers, resources, data, alerts and events relevant to your needs. Cut through the clutter to focus on the critical events, while retaining access to all the detail you might need in the future.
- **Monitor the Full Stack** – Monitor your operating system, applications and the performance of your computing resources.
- **Multi-Platform Support** – Deploy Maxava Monitor Mi8 across IBM Power Systems, Windows and Linux, and have a single view of all your computing resources.
- **Supporting Architectural Changes** – You no longer need specialist tools to manage across your different deployment architectures. Maxava Monitor Mi8 supports private, public and hybrid cloud models out-of-the box. Its agents natively support whatever your current architecture model is and will allow you, or your service provider, to monitor your workloads. Expect Mi8 to seamlessly evolve as your architecture changes.
- **Distribute Support Workload** – Direct alerts and information to the right people when and where you require by utilizing the distribution and escalation capabilities.

### Systems Specification

Agent Types	AIX, IBM I, Windows and Linux
Browser Support	Chrome v51.x or later Firefox v48 or later Safari v9.x or later
Mobile Device Support	iOS v9.3 or later iPad v9.3.4, watchOS v2.x or later
Event Types	Maxava HA, remote journaling ASP utilization, subsystem activity DASD utilization, pools MQ monitoring, object existence checks Jobs running, job queues Output queues, printer definitions QHST, audit journals QAUD, spool file
Event Notifications	Email, SMS, text to speech Apple Push and Twitter
Event escalation	User-defined escalation paths User-defined escalation thresholds
Event Types	HA, remote journaling ASP utilization, subsystem activity DASD utilization, pools MQ monitoring, object existence checks Jobs running, job queues Output queues, printer definitions
Rules Features	Select parameters Time and data triggers Re-useable rule templates
